- Kubernetes

PROFILE

With a keen interest in crafting efficient and innovative software solutions, this seasoned developer brings boundless enthusiasm and dedication to every project. Having excelled and learned significantly in their first development role, they're now eager to tackle new challenges and apply their skills to future endeavours. Their comprehensive understanding of programming languages and frameworks, coupled with attention to detail and proactive problem-solving, ensures the delivery of high-quality code within specified timelines. With strong communication skills and a collaborative spirit, they seamlessly coordinate with cross-functional teams to achieve project objectives efficiently.

EXPERIENCE

Little's Chauffeur Drive

2023 - PRESENT

Systems Software Developer (Full-stack)

Tech Stack: React // Django // Flutter // Azure // MySQL

- Designed, developed and deployed a bespoke sales CRM system (including a sales dashboard and client reporting suite), introducing oversight of revenue and real-time analytics so sales can take relevant action
- Led the design and development of a new chauffeur application to enhance usability. Implemented a local SQLite database, advanced user feedback and error handling mechanisms, and a Spotify-inspired 'Now Playing' bar for active hires, resulting in more efficient navigation and increased chauffeur proficiency
- Automation of company workload to increase employee productivity, leading to increased generation of customer jobs
- Collaborated in the creation of a testing suite to promote TDD and decreasing likelihood of bugs
- Reinforce and maintain cloud deployment uptime by adding a health-check to increase instances as required, and remove instances that have degraded - reducing downtime and saving costs
- Introduced Agile ceremonies to a previously unstructured team, making it easier to plan around goals and aligning team to continuous delivery of features
- Refactored (including a major restructure of company invoicing) for quicker, cleaner, and more easily maintainable code
- Developing new components and further expanding/improving on already available features
- Responsible for the development and maintenance of in-house enterprise system and chauffeur mobile application

Primeline Express   2020 - 2023
Transport Operator

- Designed process for new Brexit customs arrangements, resolving import/export challenges for diverse goods via Ireland
- Implemented meticulous tracking systems and manifests to ensure precise oversight of customer deliveries
- Achieved positive customer and business outcomes by operating within defined KPIs and maximising financial margins through strategic pricing and expenditure monitoring

HP Transport Scotland Ltd   2015 - 2020
Associate Operations Manager

- Coordinated and planned daily fleet movements, scheduling routes and conducting driver debriefs to meet schedule demands
- Personally audited air and sea freight imports and exports to guarantee on-time deliveries, exceeding customer expectations
